

Chickpea Flamenco Kabuli type

Seed size	small big
Food use or feed use	Human consumption
Maturity time	very early very late
Quality	TKW : 290-310 g - Protein content : 22- 24% Seed color : Light beige
Agronomic characteristics	Number of pods per plants : 40 - 50 Anthrachnose disease tolerance
Technical advice	Row width: 40-50 cm Planting depth: 3-4 cm Sow when the soil temperature is at least 7-10 °C Sowing rate: 7 units/ha to achieve a density of 50 plants/m²
Packaging	Units of 75.000 seeds

Key points

- > Consistently high yielding chickpea variety
- > Suitable in all European climates (and more)
- > Good drought tolerance
